

Welcome to Plejd

With the same simplicity as traditional lighting, but with a number of new possibilities, smart lighting from Plejd has become the number one choice for electricians and users.

Whether you are planning to build a house, renovate a room, or want smart lighting for your business, Plejd is the ideal choice. With our wireless technology, you can start small and expand as needed, while always having a safe traditional electrical installation as the basis, getting smart lighting has never been easier.

In addition to the lighting control you are used to, smart lighting from Plejd gives you a range of new possibilities such as scenarios, scheduling, app control, and much more. Electricians have had vast experience of Plejd's range since 2016 and have proven that the installation and service are easy, safe, and secure.

Button, app, or voice

Smart lighting from Plejd supplements your standard light switches with more ways to control your lighting. Use the app on the sofa or your voice via Google Home when you have your hands full.* You can simply configure and change your lighting as needed, create and edit scenarios, and automate with time functions. Whatever the situation, Plejd gives you numerous ways to control your lighting for a more comfortable life.

Scenarios

Using the app, you can easily create scenarios that suit your needs on all occasions and activate them from your usual light switches or the app. Turn off all the lights from the light switch in the hall when you leave for work, or why not use the app to start the evening film scenario from the comfort of your sofa.

Time functions

Automatically turn on facade lighting when the sun sets and turn them off when the sun rises. With Plejd you can schedule your lighting to a specific time of day or based on sunrise and sunset.

Vacation mode

When you're away from home, you can let vacation mode switch your lighting on and off automatically.* Imitates the behavior of someone being at home, relax and enjoy your vacation.

Wireless convenience

With our wireless technology, you do not have to think about costly wiring, Plejd is equally suitable for new builds as for renovation projects. Regardless of whether you start small or big, you can always easily expand your system as needed. All devices interact and create a mesh for maximum range and stability.

*The feature requires a Gateway.

In safe hands

With a traditional electrical installation at heart and over thirty thousand electricians in Europe working with installing Plejd, you can feel sure you're in good company all the way from planning to installation.

Get started with Plejd

Plejd's products are installed by authorized electricians. Together with your electrician, you can form the solution that suits you the best. If you have any questions about Plejd or our products, you are, of course, welcome to contact us and we will help you.

Our products

With our comprehensive range for lighting control, we offer products for most purposes. Already with the first product you get a great number of advantages compared to a traditional option with straightforward settings and light design, but the more products you add the more advantages you get. With our wireless and robust mesh technology, it's as easy to start small and expand your system over time as it is to install directly in your entire home or business.

 **MADE IN SWEDEN**

All our products and services are developed in-house, from sketches and ideas to finished product. Our products are produced in Sweden and some of them directly on our own production line in our premises, where our focus is set on high quality, ease-of-use and service. We believe it is important that our customers are happy with their choice of Plejd.
